

XTS Introspect for XenApp™

Beyond Monitoring—
Intelligent Analytics for Virtualization™

INTROSPECT AT A GLANCE

Easy-to-Use Interface

Introspect's intuitive report generator makes creating reports a snap, with starter templates and no custom coding.

Scalable Analytics Engine

Our analytics engine enables fast report generation based on users, applications, processes and server activities, pulling from unlimited usage history.

Automated Scheduling

Introspect reports can be scheduled on an "ad hoc" and recurring basis. Reports can be archived, imported into a portal, and distributed via email in PDF, Excel, HTML or XML format.

Flexible OLAP Architecture

Introspect's OLAP architecture provides unparalleled reporting and charting elasticity for multidimensional metric analysis.

Fast Installation

Out-of-the-box installation and configuration has you generating reports in minutes with zero impact to your production environment.

The simplicity of creating useful reports with Introspect is like nothing else on the market.

Fraser Muir, Development Manager, Queen Margaret University

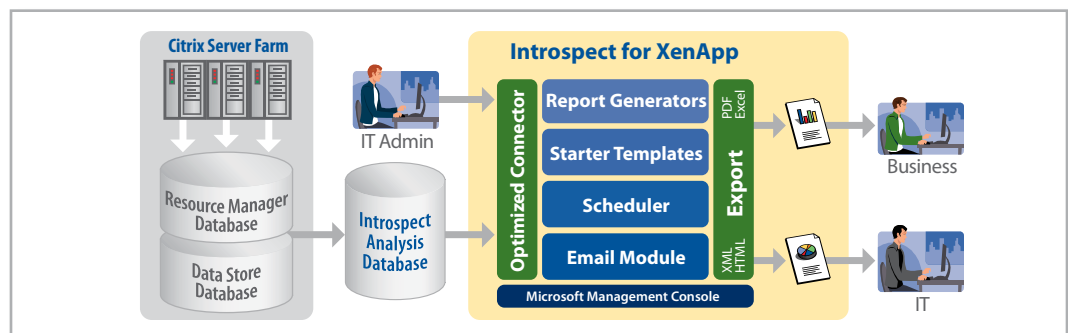

Optimize Your Citrix Investment with Advanced Analytics for XenApp

Introspect from XTS delivers the capabilities Citrix enterprise customers need to maximize the value of their Citrix investments. Introspect enables Citrix customers to increase productivity and reduce costs by providing detailed visibility into actual Citrix server usage and configuration over time. With an easy-to-use interface and a flexible, scalable OLAP architecture, Introspect's analytics engine delivers advanced business intelligence capabilities for more accurate planning, billing, application management and auditing of your Citrix server farm.

Introspect Extracts and Presents Valuable Usage Information

Introspect is not another monitoring tool. Rather, it complements real-time monitoring solutions, such as Citrix EdgeSite, by providing valuable usage statistics, presented in a flexible, powerful reporting and analysis dashboard giving you the ability to:

- **Improve Capacity Planning** — Introspect provides previously unavailable insight into your Citrix server farm, enabling you to optimize your hardware resources using meaningful baselines instead of historical metrics.
- **Advanced Configuration Analysis** — Understanding where applications are deployed, who has access, and associated properties is critical to managing your XenApp server farm. Introspect configuration analysis efficiently documents your Citrix farm and provides powerful insight to troubleshoot configuration problems.
- **Evaluate Citrix License Utilization** — Accurately determine whether additional XenApp licenses are needed through Introspect's unprecedented concurrent usage reports, potentially saving thousands of dollars on unnecessary new licenses.
- **Enhance Application Management** — Reduce costs by retiring unused applications and maximize investment in frequently used applications by ensuring all applications receive appropriate resources and attention.
- **Perform Usage Audits** — Support government and regulatory compliance initiatives with granular Citrix server usage audits.
- **Implement Chargebacks** — Customizable billing reports let you monetize your XenApp usage by department or by customer.

Introspect leverages Citrix Resource Manager data to help you improve management of your Citrix farm

Introspect for XenApp provides an affordable, enterprise class solution that is long overdue for Citrix customers looking to get the maximum value from Resource Manager summary data.

Douglas A. Brown,
Independent Virtualization
Analyst, DABCC, Inc.

State-of-the-Art Reporting and Analysis

Introspect uses multi-dimensional concepts fundamental to OLAP – the database architecture used in business intelligence – to deliver powerful and flexible reporting capabilities. Create custom reports, without advanced coding, or use Introspect out-of-the-box starter templates to get you started. You can easily produce reports to proactively plan server farm expansion, track and manage your applications, or generate audit reports for management that show usage metrics down to the minute over any time period.

Introspect usage reports and analysis help you identify trends, improve capacity planning, and eliminate unnecessary capital outlays for hardware

No Additional Network Overhead

By leveraging hard-to-access usage data stored deep inside the Citrix Resource Manager summary database, Introspect provides comprehensive historical analysis. Introspect is an agent-less architecture Introspect, and your production Citrix environment is never negatively impacted

Scalable Performance

With built-in scalability provided by Introspect’s enterprise business intelligence engine, you can periodically archive and purge your Resource Manager summary database while maintaining unlimited usage history in Introspect’s analysis database.

Active Directory Support

Introspect provides tight integration with Active Directory and has been field proven at customer sites with more than 60,000 Active Directory users.

Technical Features

- Non-intrusive reporting architecture leverages existing Citrix Resource Manager summary database. No agents required.
- Flexible export options for PDF, Excel, HTML or XML formats.
- Microsoft® Management Console (MMC) snap-in for easy administration.

Requirements

- Microsoft Windows® 2000 Server, Microsoft Windows 2003, or Microsoft Windows XP
- Citrix XenApp, Citrix MetaFrame FR3, XPe, or Citrix Presentation Server 3.0 & 4.x Enterprise or Platinum Edition
- Microsoft SQL Server 2000/2005 Standard or Enterprise Edition, includes SQL Server 2000 Analysis Services.
